

# Python Course for Physicists (And everyone else!) Chunk 0: Preparation

By Jonathan Bollig

08.10.2025

Hi and welcome to my course. To save some time on Wednesday morning, I would like to ask you, to make some preparations.

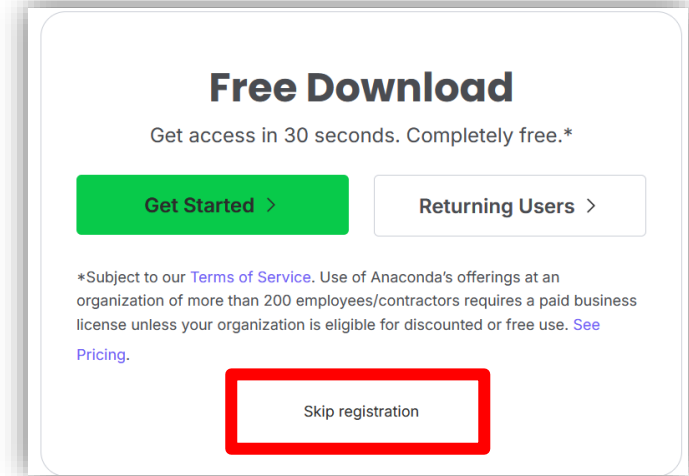

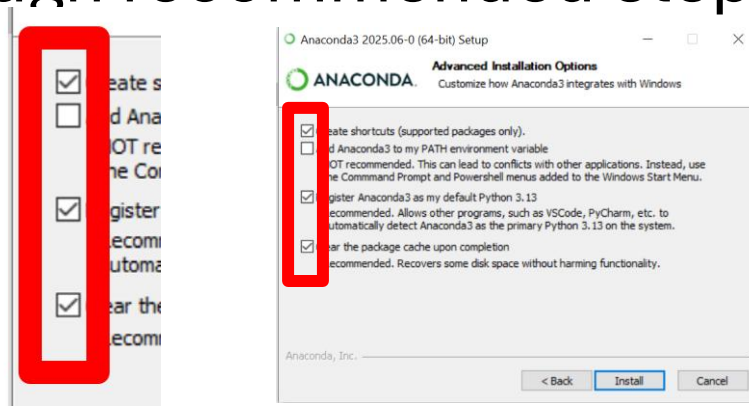

For this, just follow the steps on the next 4 slides. If you encounter problems, don't worry, we can fix them together (see last slide).

# If python is installed already:

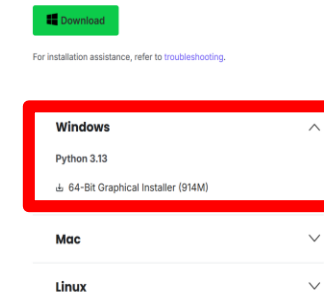

- Download files and execute sample notebook (see last 2 slides)
- If this works: Nice 😊
- If not: Uninstall python and all related software (if you don't need it for other reasons) and continue with next slide.

# Installing Python

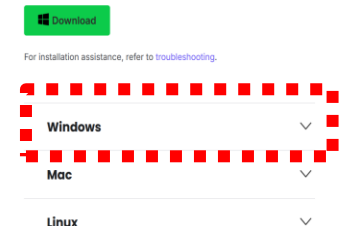

- Anaconda: Single program to install, includes all scientific relevant packages. Visit <https://www.anaconda.com/download>
- Skip Registration
- Install Anaconda Distribution (left) or Miniconda if not 5 GB disc space (right)
- Click through recommended steps, watch here:

## Distribution Installers

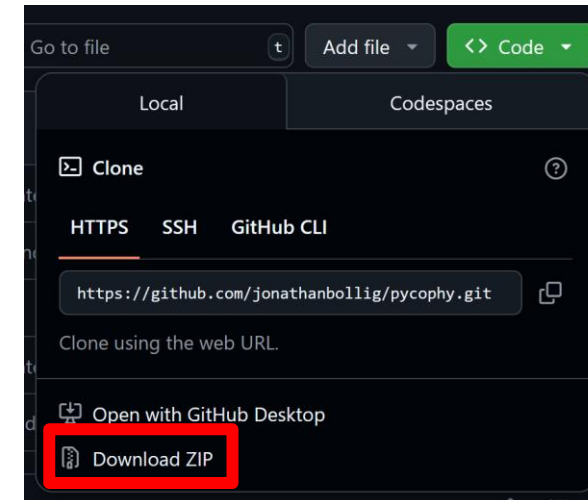

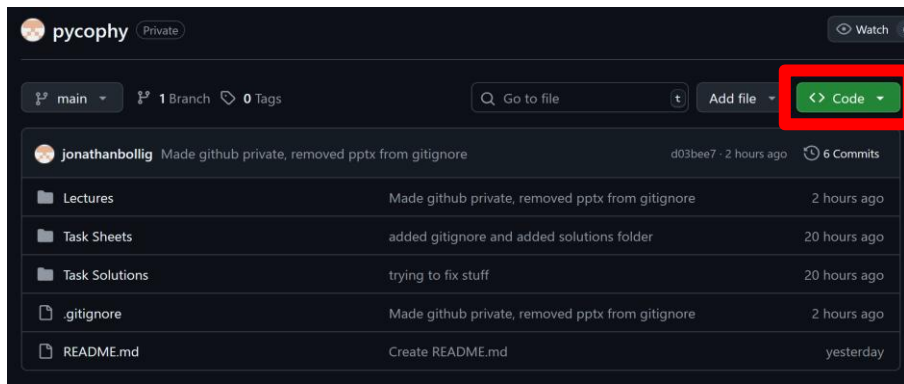

## Miniconda Installers

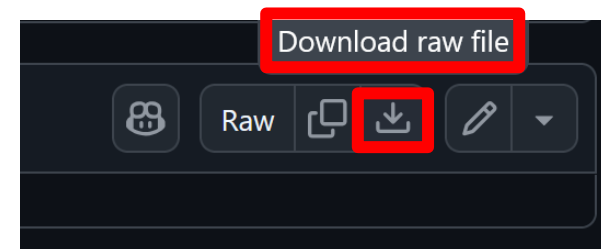

# Git – Download Course Files

- <https://github.com/jonathanbollig/pycophy>
- Download ZIP with all course files:

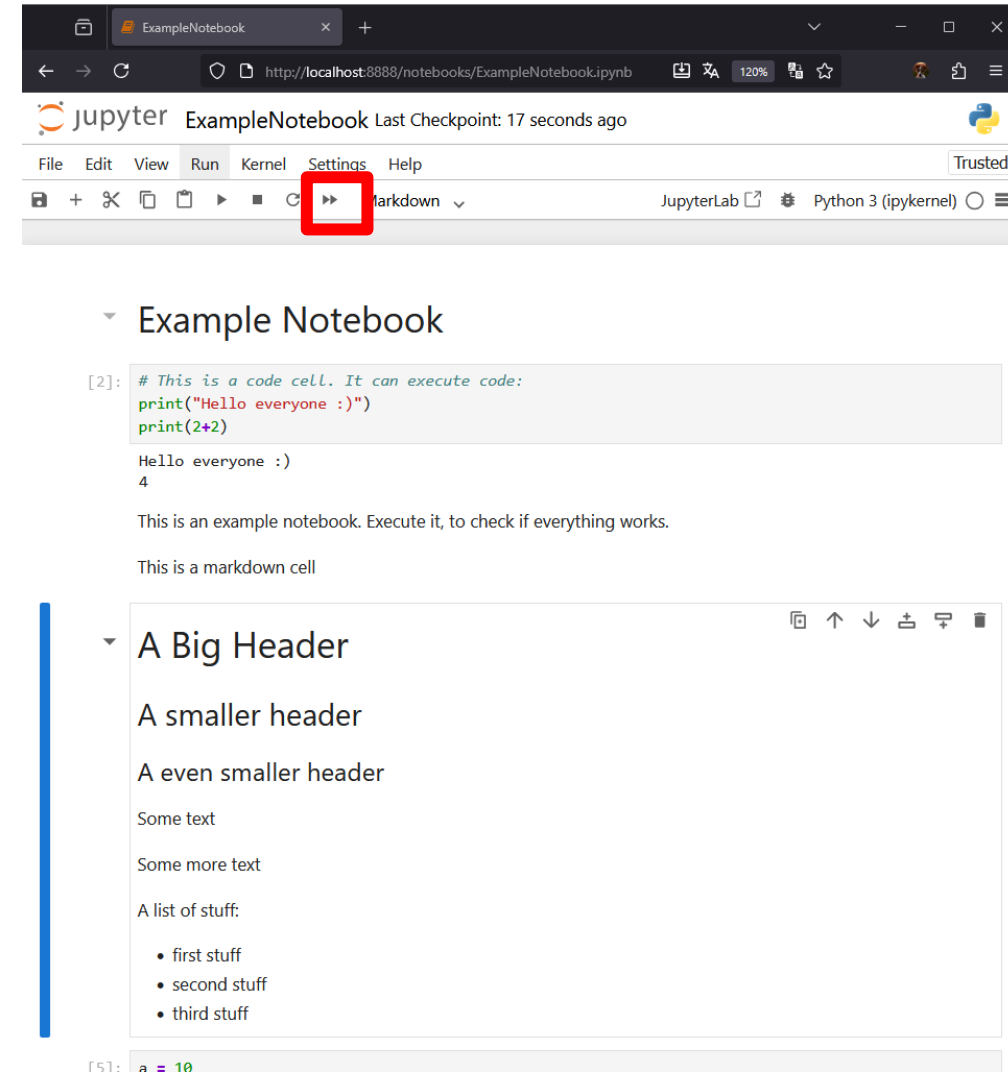

- Or: Download individual file:
  - Click on file, then top right corner:

# Execute Sample Notebook

- When double clicking the notebook, it should open your default browser.
- Try to execute the file (red box)
  - If asked, click on Red button “Restart”
- In case of problems:
  - Chill, and come 30 minutes earlier on Wednesday, so we can fix the problem together.
  - Please write [jonathan.bollig@uni-jena.de](mailto:jonathan.bollig@uni-jena.de) a short mail, so I know how many problems to expect on Wednesday morning 😊

# See you soon 😊

**Python installed successfully**
